Clean And Competitive: Opportunities For U.S. Manufacturing Leadership In The Global Low-carbon Economy

Peter Fox-Penner, David M. Hart, Henry Kelly, Ryan C. Murphy, Kurt Roth, Andre Sharon, and Colin Cunliff

June 2021

Our Bottom Line

The United States should respond to the twin challenges of rebuilding a vibrant, inclusive economy that includes a strong manufacturing sector and accelerating progress toward net-zero emissions

by adopting an integrated strategy that features policies that target specific industries that have a high potential for both emissions reduction and high-quality job growth.

Manufacturing Matters for...

- Resilience
- Equity
- Innovation
- Competitiveness
- National security
- And...

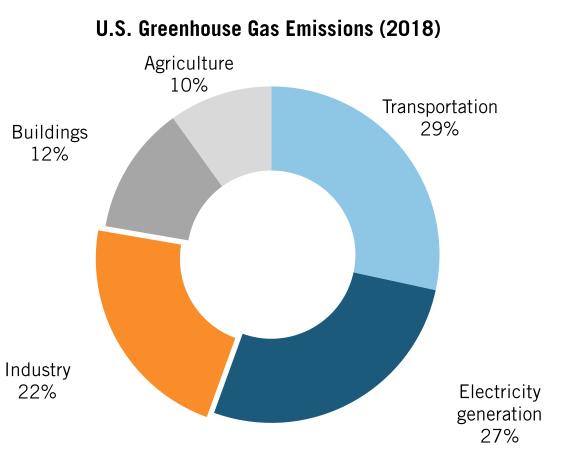

\$0 2002 2003 2004 2005 2006 2007 2008 2009 2010 2011 2012 2013 2014 2015 2016 2017 2018 -\$100 -\$200 -\$300 -\$400 -\$500 -\$600 -\$700 -\$800 -\$900 Source: U.S. Census Bureau, Exports & Imports by NAICS Commodities

U.S. Manufacturing Trade Balance (Billions)

And....Climate

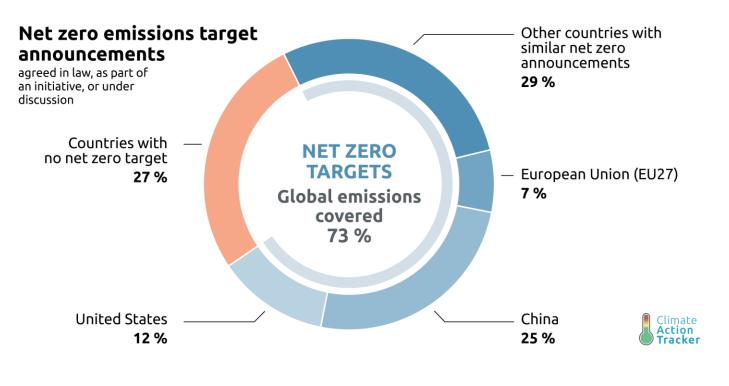

- Causes over 30% of GHG emissions (direct and indirect, US and global)
- Required for new lowcarbon and negative emissions technologies
- Could displace emissions from other sectors (e.g. agriculture)

The Opportunity

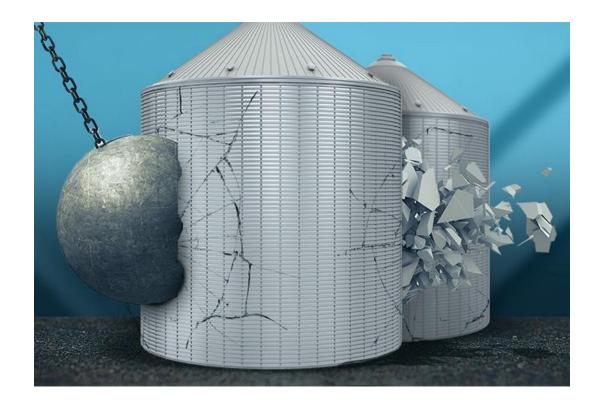

- Global retooling toward clean manufacturing
- History lesson: Transformations can radically alter international competitive positions

An Integrated Clean Manufacturing Strategy

- Leverage U.S. strength in science and technology
- Target industries and technologies in which domestic producers are most likely to succeed against international competitors
- Act forcefully via R&D, demonstration, and early deployment policies

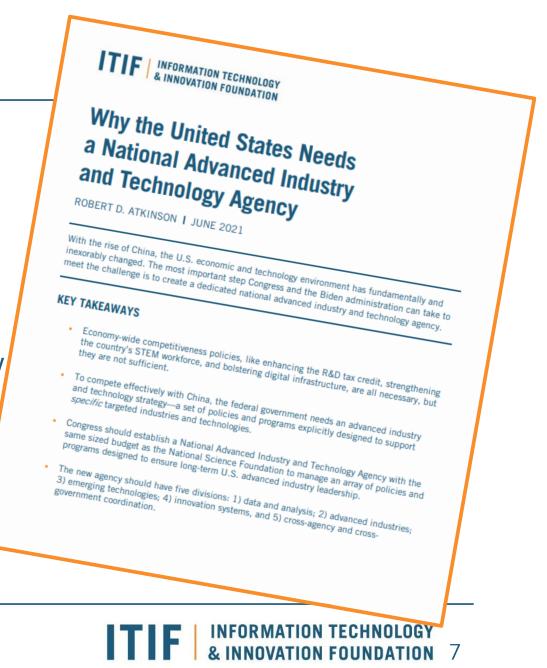

"Until very recently, these two national challenges have been treated largely within their own policy silos."

Preliminary Screening Questions

- Drawn from Atkinson (2021):
 - Can the industry contribute to national goals?
 - Can it leverage existing strengths?
 - Would federal policy strengthen industry performance?
 - Is industry willing and would it share costs?
- Plus: has it been overlooked?

Four Opportunities

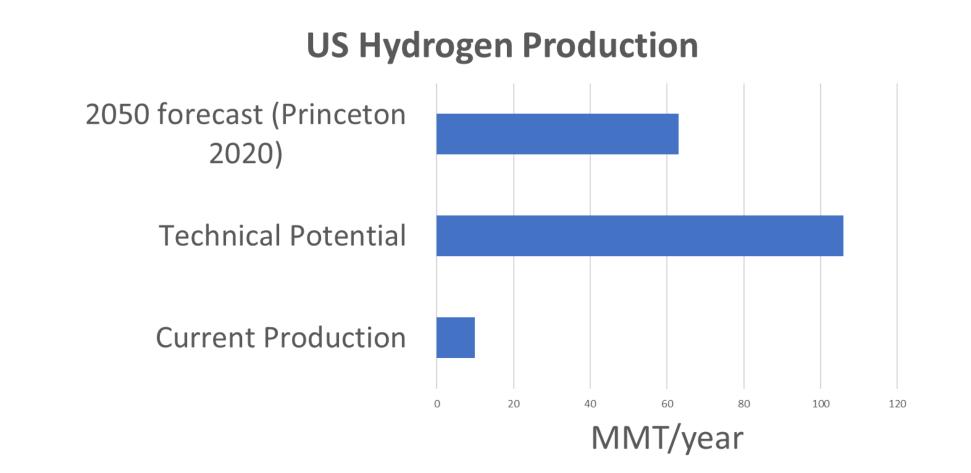

- A joint research team from ITIF, Boston University, and Fraunhofer USA conducted interviews and expert workshops.
- We identified four opportunities to strengthen U.S. competitive advantage that have largely been overlooked:
 - Hydrogen production
 - Heating, cooling, and drying equipment
 - Chemicals production and recycling

- Biotech-based alternatives to meat and dairy products

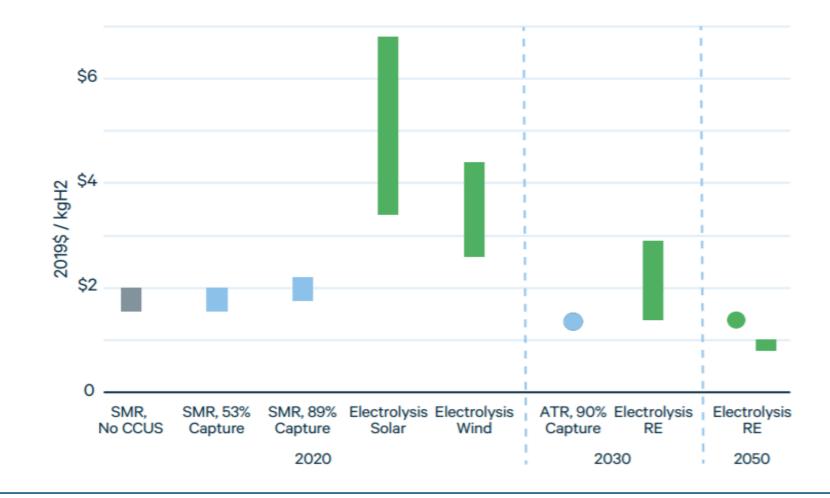

Hydrogen Production: The Opportunity

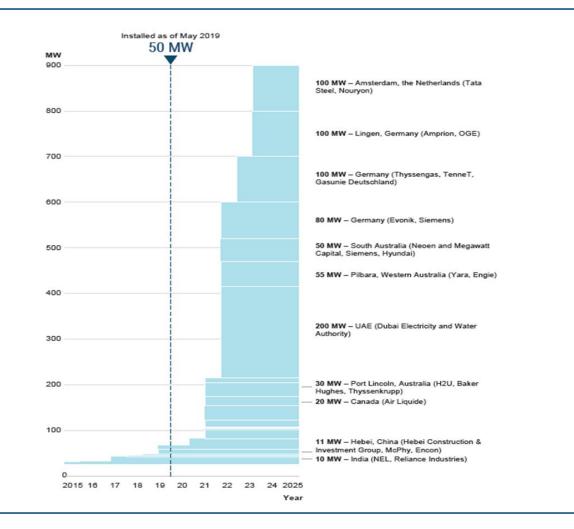

Hydrogen Production: Technical Potential

TIF INFORMATION TECHNOLOGY & INNOVATION FOUNDATION 10

Hydrogen Production: Global Positioning

- European Union: 40 GW of green hydrogen electrolyzers by 2030
- Australia: world's largest green ammonia plant

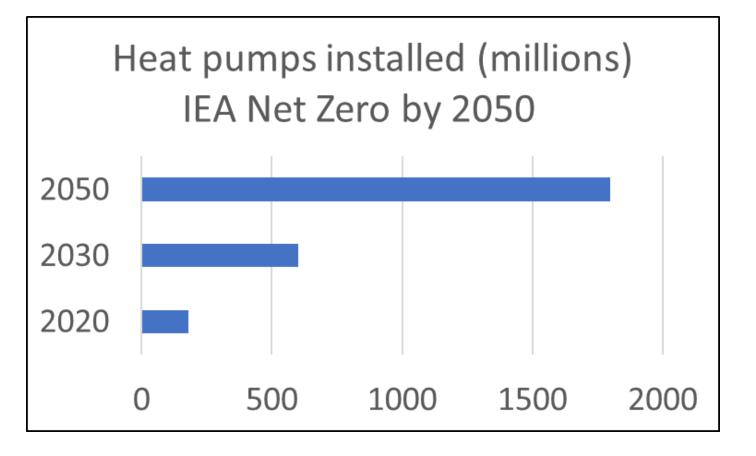

Hydrogen Production: Policy Imperatives

- Moonshot goal of \$1/kg goal for hydrogen production
- R&D for industrial applications, heavy-duty transportation
- Manufacturing USA institute on electrolyzer manufacturing
- Pilot and commercial scale demonstration
- DOD & GSA purchasing
- Standards & safety

Heating, Cooling, and Drying: The Opportunity

- Electrification of buildings means replacing fossil appliances & many industrial processes
- Potential for enormous growth in demand

TIF INFORMATION TECHNOLOGY & INNOVATION FOUNDATION 13

Heating, Cooling, and Drying: Technical Potential

- Theoretical efficiency of heat pumps ~3x typical performance
- Many promising paths to efficiency gains:
 - Novel refrigerants
 - Solid state refrigerants
 - Geothermal, including community systems
 - Membranes and mechanical drying

Heating, Cooling, and Drying: Global Positioning

- Weak incentives for U.S. manufacturing research
- European roadmap goal: 36 heat pump megafactories by 2030
- Japan world leader in heat pumps

Heating, Cooling, and Drying: Policy Imperatives

- Integrated RD&D roadmap with adequate funding
- Loans and other incentives for advanced heat pump manufacturing
- Standards based on performance of integrated systems (including grid integration)
- Building retrofits include electrification
- Include advanced heat pumps in federal retrofits

Chemical Production and Recycling: The Opportunity

- 18% of GHG emissions from industry
- Major U.S. employer
- Disruptions expected in fuels for electric generation and transportation: 2/3 of U.S. oil and gas market
- Rapid growth in demand for plastics and other chemical products

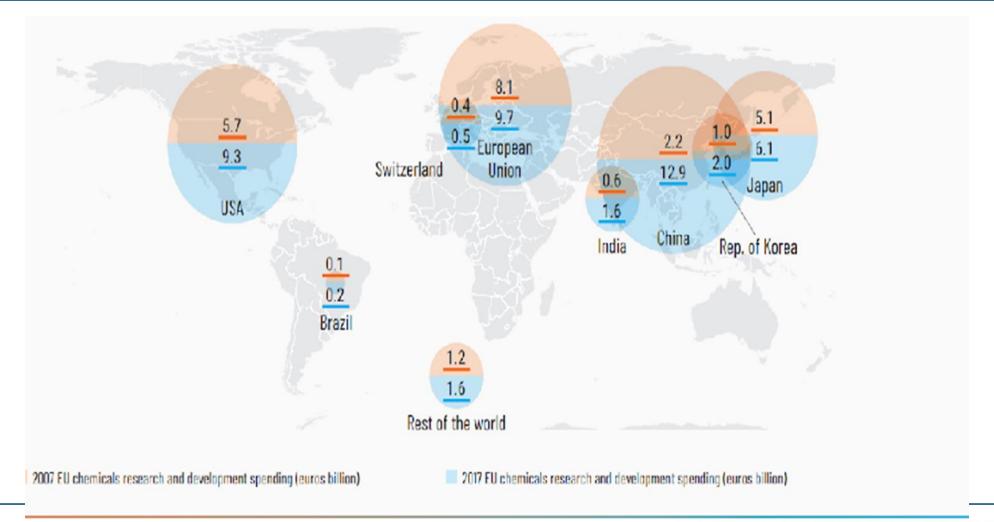

Chemical Production and Recycling: Technical Potential

- Chemical manufacturing now uses fossil fuels for processing and as a feedstock
- Technical opportunities include products:
 - designed for recycling
 - produced from biological materials
 - produced directly with artificial photosynthesis

Chemical Production and Recycling: Global Positioning

F INFORMATION TECHNOLOGY & INNOVATION FOUNDATION 19

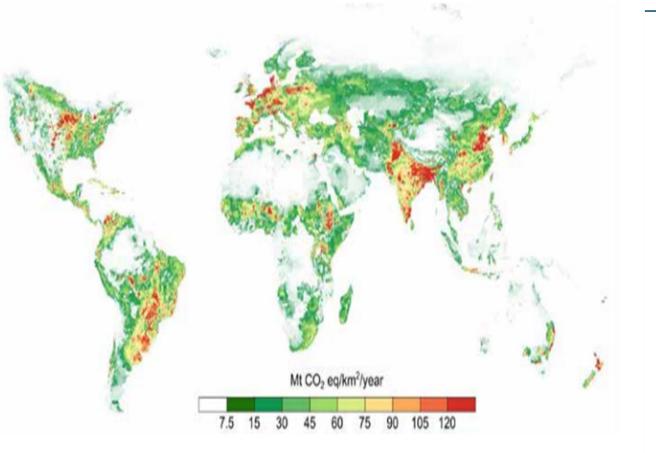

Chemical Production and Recycling: Policy Imperatives

- Integrated RD&D roadmap backed by adequate funding
- Strong interagency management drawing on DOE, USDA, DOD, NSF
- Expanded use of USDA rural economic development programs including BioPreferred
- Labeling to show climate impact of products
- DOD and other public procurement

Biotech-based Meat and Dairy Products: The Opportunity

- 12% or more of global GHGs
- Meat, poultry, and dairy industries employ more than half a million people in the U.S.

Biotech-based Meat and Dairy Products : Technical Potential

- Rapid decline in the cost of gene sequencing and synthesis
- Fermentation using new technologies produce virtually any chemical product
- Cell cultivation to produce meat substitutes less developed but attracting major investment
- Cost reduction is a major challenge, one study expects price parity in early 2030s

Biotech-based Meat and Dairy Products : Global Positioning

- U.S. leads global biotechnology revolution
- Major venture funding available in U.S. (half of new fermentation companies)
- Comparatively high U.S. consumer acceptance
- Worldwide competition growing in Europe and Asia
- Large testing facilities available in Europe

Biotech-based Meat and Dairy Products: Policy Imperatives

- Research focused on feedstocks, production systems, and scale-up
- Fund authorized Agriculture Advanced R&D Authority
- Public funding for large testing facilities
- Modernize FDA oversight of cultivated meat
- Review incentives so that innovative and traditional meat and dairy producers can compete fairly
- Ensure equal treatment of innovative proteins in federal food procurement and nutrition support
